

Other operations on matrices

1) Addition.

If $A = \begin{bmatrix} a_{11} & \dots & a_{1n} \\ \vdots & & \vdots \\ a_{m1} & \dots & a_{mn} \end{bmatrix}$, $B = \begin{bmatrix} b_{11} & \dots & b_{1n} \\ \vdots & & \vdots \\ b_{m1} & \dots & b_{mn} \end{bmatrix}$ are $m \times n$ matrices then

$$A + B = \begin{bmatrix} a_{11} + b_{11} & \dots & a_{1n} + b_{1n} \\ \vdots & & \vdots \\ a_{m1} + b_{m1} & \dots & a_{mn} + b_{mn} \end{bmatrix}$$

Example:

$$A = \begin{bmatrix} 1 & 2 & 3 \\ 4 & 5 & 6 \end{bmatrix} \quad B = \begin{bmatrix} 0 & -1 & 2 \\ 4 & 1 & 3 \end{bmatrix}$$

$$A + B = \begin{bmatrix} 1 & 1 & 5 \\ 8 & 6 & 9 \end{bmatrix}$$

Note. The sum $A + B$ is defined only if A and B have the same dimensions.

1) Scalar multiplication.

If $A = \begin{bmatrix} a_{11} & \dots & a_{1n} \\ \vdots & & \vdots \\ a_{m1} & \dots & a_{mn} \end{bmatrix}$, and c is a scalar then

$$cA = \begin{bmatrix} ca_{11} & \dots & ca_{1n} \\ \vdots & & \vdots \\ ca_{m1} & \dots & ca_{mn} \end{bmatrix}$$

Example;

$$A = \begin{bmatrix} 1 & 2 & 3 \\ 4 & 5 & 6 \end{bmatrix}$$

$$3 \cdot A = \begin{bmatrix} 3 & 6 & 9 \\ 12 & 15 & 18 \end{bmatrix}$$

Properties of matrix algebra

1) $(AB)C = A(BC)$

2) $(A+B)C = AC + BC$
 $A(B+C) = AB + AC$

3) I_n = the $n \times n$ identity matrix:

$$I_n = \begin{bmatrix} 1 & 0 & \dots & 0 \\ 0 & 1 & \dots & 0 \\ \vdots & \vdots & \ddots & \vdots \\ 0 & 0 & \dots & 1 \end{bmatrix}$$

If A is an $m \times n$ matrix then

$$A \cdot I_n = A$$

$$I_m \cdot A = A$$

Note:

1) If $v = \begin{bmatrix} c_1 \\ c_2 \\ \vdots \\ c_n \end{bmatrix}$ then

$$I_n v = \begin{bmatrix} 1 & 0 & \dots & 0 \\ 0 & 1 & \dots & 0 \\ \vdots & \vdots & \ddots & \vdots \\ 0 & 0 & \dots & 1 \end{bmatrix} \cdot \begin{bmatrix} c_1 \\ c_2 \\ \vdots \\ c_n \end{bmatrix} = c_1 \begin{bmatrix} 1 \\ 0 \\ \vdots \\ 0 \end{bmatrix} + c_2 \begin{bmatrix} 0 \\ 1 \\ \vdots \\ 0 \end{bmatrix} + \dots + c_n \begin{bmatrix} 0 \\ 0 \\ \vdots \\ 1 \end{bmatrix} = \begin{bmatrix} c_1 \\ c_2 \\ \vdots \\ c_n \end{bmatrix} \underset{\parallel v}{=}$$

So $I_n v = v$ for any vector v .

$$T_{I_n} : \mathbb{R}^n \longrightarrow \mathbb{R}^n$$
$$v \longmapsto I_n v = v$$

2) For any $m \times n$ matrix A we have; $A \cdot I_n = A$
 $I_m \cdot A = A$

$$\begin{array}{ccccc} \mathbb{R}^n & \xrightarrow{T_{I_n}} & \mathbb{R}^n & \xrightarrow{T_A} & \mathbb{R}^n \\ v & \xrightarrow{\text{red}} & I_n v = v & \xrightarrow{\text{red}} & A(I_n v) = Av \end{array}$$

91

$$T_{A \cdot I_n} = T_A$$

Non-commutativity of matrix multiplication

1) If AB is defined then BA need not be defined.

Ex. 8.1

$$A = \begin{bmatrix} 1 & 2 \\ 3 & 4 \end{bmatrix}_{2 \times 2}$$

$$B = \begin{bmatrix} 0 & -1 & 7 \\ 5 & 4 & 2 \end{bmatrix}_{2 \times 3}$$

$A \cdot B$ - defined
(2×2) (2×3)

$B \cdot A$ - not defined
(2×3) (2×2)

2) Even if both AB and BA are both defined then usually

$$AB \neq BA$$

Example:

$$A = \begin{bmatrix} -1 & 0 \\ 0 & 1 \end{bmatrix}$$

$$B = \begin{bmatrix} 0 & -1 \\ 1 & 0 \end{bmatrix}$$

$$AB = \begin{bmatrix} -1 & 0 \\ 0 & 1 \end{bmatrix} \cdot \begin{bmatrix} 0 & -1 \\ 1 & 0 \end{bmatrix} = \begin{bmatrix} 0 & 1 \\ 1 & 0 \end{bmatrix}$$

$$BA = \begin{bmatrix} 0 & -1 \\ 1 & 0 \end{bmatrix} \cdot \begin{bmatrix} -1 & 0 \\ 0 & 1 \end{bmatrix} = \begin{bmatrix} 0 & -1 \\ -1 & 0 \end{bmatrix}$$

not equal!

Note:

$$T_{AB} = T_A \circ T_B$$

$$T_{BA} = T_B \circ T_A$$

One more operation on matrices: matrix transpose

Definition

The transpose of a matrix A is the matrix A^T such that

$$(\text{rows of } A^T) = (\text{columns of } A)$$

Example:

$$A = \begin{bmatrix} 1 & 2 & 3 \\ 4 & 5 & 6 \end{bmatrix}$$

2×3

$$A^T = \begin{bmatrix} 1 & 4 \\ 2 & 5 \\ 3 & 6 \end{bmatrix}$$

3×2

Properties of transpose

- 1) $(A^T)^T = A$
- 2) $(A + B)^T = A^T + B^T$
- 3) $(AB)^T = B^T A^T$
