### Recall:

- 1) We can multiply vectors by matrices.
- 2) Matrix equation: Ax = b

Col(A) = (span of column vectors of A)

$$A = \begin{bmatrix} 1 & 3 \\ 2 & 4 \end{bmatrix}$$
  $Col(A) = Span(\begin{bmatrix} 1 \\ 2 \end{bmatrix}, \begin{bmatrix} 3 \\ 4 \end{bmatrix})$ 

Nul(A) =(set of solutions of Ax = 0)

**Recall:** Nul(A) can be always described as a span of some vectors.

**Example.** Find the null space of the matrix

$$A = \left[ \begin{array}{rrrr} 1 & 1 & 0 & 2 \\ -2 & -2 & 1 & -5 \\ 1 & 1 & -1 & 3 \end{array} \right]$$

We need to solve Ax = 0

$$\begin{bmatrix} 1 & 1 & 0 & 2 & 0 \\ -2 & -2 & 1 & -5 & 0 \\ 1 & 1 & -1 & 3 & 0 \end{bmatrix} \text{ now red.} \qquad \begin{bmatrix} 1 & 1 & 0 & 2 & 0 \\ 0 & 0 & 1 & -1 & 0 \\ 0 & 0 & 0 & 0 \end{bmatrix}$$
free

Solutions:

$$\begin{cases} \times_1 = -\times_2 - 2\times_4 \\ \times_2 = \text{free} \\ \times_3 = \times_4 \\ \times_4 = \text{free} \end{cases}$$

$$\begin{cases} x_1 = -x_2 - 2x_4 \\ x_2 = \text{free} \end{cases}$$

$$\begin{cases} x_1 = -x_2 - 2x_4 \\ x_2 = \text{free} \end{cases}$$

$$\begin{cases} x_2 = -x_4 \\ x_3 = x_4 \\ x_4 = \text{free} \end{cases}$$

$$\begin{cases} x_1 = -x_2 - 2x_4 \\ x_2 = -x_2 - 2x_4 \\ x_4 = -x_2 - 2x_4 \\ x_5 = -x_2 - 2x_4 \\ x_6 = -x_2 - 2x_4 \\ x_7 = -x_2 - 2x_4 \\ x_8 = -x_2 - 2x_4$$

$$Nul(A) = Span \left( \begin{bmatrix} -1 \\ 0 \\ 0 \end{bmatrix}, \begin{bmatrix} -2 \\ 0 \\ 1 \end{bmatrix} \right)$$

**Example.** Solve the matrix equation Ax = b where

$$A = \begin{bmatrix} 1 & 1 & 0 & 2 \\ -2 & -2 & 1 & -5 \\ 1 & 1 & -1 & 3 \end{bmatrix} \qquad \mathbf{b} = \begin{bmatrix} 1 \\ 0 \\ -1 \end{bmatrix}$$

# Solution!

## Solutions:

$$\begin{cases} x_1 = 1 - x_2 - 2x_4 \\ x_2 = \text{free} \\ x_3 = 2 + x_4 \\ x_4 = \text{free} \end{cases}$$

$$\begin{cases} x_1 = 1 - x_2 - 2x_4 \\ x_2 = \text{free} \\ x_3 = 2 + x_4 \\ x_4 = \text{free} \end{cases} \quad x = \begin{bmatrix} 1 - x_2 - 2x_4 \\ x_2 \\ 2 + x_4 \end{bmatrix} = \begin{bmatrix} 1 \\ 0 \\ 2 \\ 1 \end{bmatrix} + x_4 \begin{bmatrix} -2 \\ 0 \\ 1 \end{bmatrix}$$
a particular a vector from solution of Ax = b Null (A)

## Proposition

Let  $v_0$  be some chosen solution of a matrix equation  $A\mathbf{x}=\mathbf{b}$ . Then any other solution v of this equation is of the form

$$\boldsymbol{v}=\boldsymbol{v}_0+\boldsymbol{n}$$

where  $n \in Nul(A)$ .
